The quick and easy solutions to create barriers in the event of flooding, mud slides, erosion, or levee breaks. Be prepared by purchasing yours before disaster strikes.

Protecting what is important to you

Be sure to visit our website at trapbag.com to see the video clip.

Our sales team is always available to answer any questions you have or to schedule a demonstration.

What are TrapBags®

TrapBag flood barriers are designed for rapid and low cost deployment in any area. TrapBag barriers are effective against flood waters, mudslides, erosion and pollutants. They are continuous, cellular barriers constructed of pentagonal cells. Each chain is 100 feet long and 6 feet tall, or taller when stacked.

The chains are linked together to create barriers any length, from 100 feet to many miles long. Once linked together the chains are filled with your choice of media. It can be sand, dirt, gravel, compost, even concrete for permanent barriers.

TrapBags may be the answer you are looking for

TrapBag barriers are designed to allow very rapid and cost effective deployment of a barrier which can be a permanent or temporary barrier to stop pollutant spills, flooding, mudslides, and erosion of beach and soil.
